Enel is a multinational energy company and one of the world’s leading integrated electricity and gas operators. Enel works in 33 countries across five continents, generating energy with a managed capacity of more than 89 GW, selling gas and distributing electricity across a network spanning approximately 2.2 million km.

With almost 73 million end users around the world, Enel has the biggest customer base among our European competitors, and we are one of Europe’s leading energy companies by installed capacity and reported EBITDA.

The Enel Group is made up of approximately 68,000 people from around the world whose brilliant work is based on our values of Responsibility, Innovation, Trust and Proactivity. Together we are working on the same goal. We are Open Power and our aim is to overcome some of the greatest challenges facing the world. This is to be achieved through a new approach which combines attention to sustainability with the best in innovation.

Enel is dedicated to creating innovative solutions that meet society’s changing needs. Through its openinnovability.com crowdsourcing platform, the company connects people and ideas from across the world, encouraging anyone to propose sustainable innovation projects and solutions that help develop local communities.

Enel is also committed to helping to achieve six of the 17 UN Sustainable Development Goals (SDGs):
7 - Access to affordable and clean energy
4 - Support for quality education
8 - Contributing to socio-economic development in the communities in which Enel operates
9 - Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation
11 - Make cities and human settlements inclusive, safe, resilient and sustainable
13 - The fight against climate change.

Enel is committed in the fight against climate change by reducing C02 emissions in energy generation. To this end, the management of both renewable (through Enel Green Power) and thermal energy is incorporated within the Global Power Generation business line in order to accelerate the transition from fossil to renewable sources.

With a presence in Europe, America, Asia, Africa and Oceania, Enel Green Power is a global leader in the green energy sector*, with an annual production of approximately 108 TWh**. Enel Green Power operates in 29 countries and has a managed capacity of over 43 GW (including over 39 GW of installed capacity); with more than 1200 plants and a generation mix that includes the main renewable sources: wind, solar, hydroelectric and geothermal power. An additional 7.8 GW of capacity is scheduled to be built by 2020.

Technological and geographical diversification are the main pillars of the company’s development strategy, which focuses its investments in growing markets characterised by an excellent availability of natural resources, strong energy demand growth rates and a stable socioeconomic situation. Enel Green Power has promoted an increasing incorporation of sustainability into its strategic vision, with the goal of increasing the benefits for the local communities where the company is active. The company has shifted from a reactive to a more proactive approach to critical issues, aimed at identifying opportunities for Creating Shared Value together with local communities. Enel Green Power believes that renewable energies are an important tool for promoting the competitiveness of the countries’ production industry and for guaranteeing the security of energy supplies: indeed, energy production from green sources contributes to creating greater energy autonomy and, at the same time, it helps protect the environment.

Thanks to its research, technological innovation, internationally-renowned operational excellence, and the hard work of almost 7600 people, Enel Green Power looks to the future fully aware of its potential for growth, both in terms of its size and operational performance. Enel Green Power invests in new businesses and technologies so as to improve its flexibility and performance, such as the integration of storage systems into renewable plants and the combination of technologies using different sources in the same plant (hybridisation). The company is eager to step into new markets, as demonstrated by its recent entry into the markets of Zambia, Indonesia, Germany, Russia, Australia and Ethiopia, positioning itself as one of the main players in these areas that represent a strong potential for growth.

With its international experience, Enel Green Power also develops custom projects to offer companies the best solutions when it comes to energy generated by renewable sources. Clean energy and sustainable projects, competitive costs and tailor-made solutions are the main benefits of the Power Purchase Agreement (PPA), tools capable of building strong, long-lasting partnerships with business and industrial clients. Enel Green Power is also one of the founding members of RES4Africa Foundation, the association founded in 2012 to promote renewable energies and the spread of know-how on the African continent.

*In terms of installed capacity of private operators.
