

ABOUT THE SEEKER

With a presence in Europe, America, Asia, Africa and Oceania, Enel Green Power is a **global leader of the clean energy sector***, with an annual production of approximately 82 TWh**, capable of meeting consumption requirements of almost 200 million families each year.

Enel Green Power operates in 30 countries and has a managed capacity of over 40.9 GW (including over 38 GW of installed capacity); with more than 1,200 plants (over 100 of which are consolidated) and a mix of generation types including the main renewable sources: wind, solar, hydroelectric and geothermal, an additional 7.8 GW of extra capacity is scheduled to be built by 2020.

Technological and geographical diversification are the main pillars of the Company's strategy, which focuses its investments in **growing markets** characterised by an excellent availability of natural resources, high growth rates of the energy demand and stable social and economic environments. Enel Green Power has integrated **sustainability** into its strategic vision, with the objective of increasing the benefits for the local communities in which the company operates. Switching from a reactive approach to criticism, to more proactive, aimed at identifying opportunities for Creating Shared Value within local communities.

Enel Green Power believes that the renewable energies are an important tool for promoting the competitiveness of the production system of the countries and for guaranteeing the security of the energy supply: indeed, energy production from green sources contributes to creating greater energy autonomy and, at the same time, it helps protect the environment.

* In terms of installed capacity of private operators.
